PROFIL

I spent most of my time developing my skills on computers learning a lot of science, such as:

Programming in Python, Cybersecurity, Databases, Networking, and many applications.

This is my passion that I never tire or get bored of, I also love to work with a team because of the benefits, work hard to face the challenges and solving problems. I seek to learn more and develop my skills to be such an active member of my society's.

PROJECTS

➤ Melanoma Classification Model Using Deep Learning

This is an assignment for graduation. In this project, we want to create a machine learning model for categorizing photos as having melanoma or not using a CNN (convolutional neural network).
